

Dozentenmanager - One-Page Summary

WHAT IT IS

A Flask-based administration app for managing university teaching data: students, courses, enrollments, exams, grades, and documents.

WHO IT IS FOR

Primary users are university lecturers or academic administrators who manage courses, enrollments, exams, and submissions.

WHAT IT DOES

- Manage universities with CRUD operations and slugged URLs.
- Manage students with validation and search and filter tools.
- Manage courses by semester and university.
- Track enrollments with status and dates.
- Manage exams, grades, and grading statistics.
- Upload and organize documents; import from email (.eml).

HOW IT WORKS

- Browser -> Flask routes (blueprints) -> service layer -> SQLAlchemy ORM -> SQLite database.
- CLI tools call the same services and convert exceptions to exit codes.
- Uploaded files stored on disk under uploads/ organized by university, semester, course, and student.

HOW TO RUN (MINIMAL)

- `uv venv --seed; source .venv/bin/activate`
- `uv sync`
- `alembic upgrade head`
- `python run.py` (open `http://127.0.0.1:5009`)
